TECHNICAL SKILLS

- **Languages:** Python, JavaScript, C/C++, Java
- **Frameworks & Lib:** Flask, Fast API, React JS, Node JS, Streamlit, Pandas, NumPy, Scikit-learn
- **Databases:** MongoDB, PostgreSQL, Redis, MySQL, BigQuery, Firestore, Vector DBs
- **Cloud & Tools:** Google Cloud (GCP), Git, GitHub, Docker, Kubernetes, Github Actions, GCP Cloud Build
- **No code/low code & Testing :** Postman, MS Power Automate, Power Apps, Figma
- **AI/ML Tools:** LLM, NLP, Agentic AI & RAG Integrations, Fast MCP, LangChain, LangGraph, Llama-Index

EXPERIENCE

Software Engineer - Executive | WPP Media – Gurugram, IN July 2024 – Present

- Developed and maintained scalable backend services using Python Flask, following RESTful API design principles.
- Built 20+ **RESTful APIs** to streamline **ad performance data** from platforms like Google Ads ,DV360 & Meta into **BigQuery**.
- Created a **Geospatial RAG Agent** with a chat interface that leverages Google Maps API and private spatial dataset uploads to provide grounded market intelligence and competitive analysis. Customized the solution for each client based on requirements.
- Developed **Meta Ad Campaign Creation Tool** using Meta Graph API to streamline client–business team–Ad activation team workflows and reduce Ad campaign creation time by ~30%, with a React-based UI for centralized visibility.
- Automated **Power BI dashboards creation** using Microsoft Graph API to cut manual dashboard creation efforts by ~70%.
- Implemented CI/CD pipelines using Github Actions, Cloud Build and Docker to automate testing and deployment of services to GCP.

Software Engineer - Intern | GroupM – Gurugram, IN | (6 Months) Jan 2024 – June 2024

- Automated manual Excel-based report & dashboard creation using **Flask API & Openpyxl framework** with **GCP Cloud Run**, integrated with Power Automate for mail based trigger – saving around 50 hours per month for the team.
- Built and maintained scalable backend services using **Python Fast API** with versioned endpoints and authentication; added unit/integration tests and **Postman** collections for regression.
- Automated daily ad-performance reporting for Meta, Google Ads & DV360 using Flask API sending reports to client’s AWS S3 buckets.

PROJECTS

NutriAI - Full-Stack AI Nutrition Platform | Link- [NutriAI](#) | [github](#) Dec 2025

- **Developed a React-based AI chatbot** for personalized nutritional coaching, diet and health guidance using text, voice & image inputs.
- Built a responsive UI using **Tailwind CSS & Framer Motion** with real-time SSE streaming, voice-to-text, and auto meal-plan generation.
- **Implemented image-to-text inference** using **Gemini 2.5 Flash** to identify dishes from user meal photos and map them to a structured macro breakdown (calories, protein, carbs, fat) via interactive **Recharts** visualizations.
- **Renders a health dashboard** that auto-calculates BMI/BMR & Metabolic Age and daily nutrient targets based on user fitness goals.
- **Built a custom Regex-based parser** to transform raw AI responses into interactive "Quick Action" buttons.
- **Architected a secure serverless backend** via Vercel Edge Functions and **Redis (KV)** to manage session-based state & rate limiting.

Trackbot - Agentic AI Personal Tracker| [github](#) Feb 2026

- **Built an agentic tracker** using **LangGraph** and **FastAPI** to automate personal data tracking (finances, health, habits etc) - via a Telegram bot and Google Sheet.
- Users can create new trackers (with **Human-in-the-Loop** for confirmation) as well as use existing ones with natural language, this replaces manual entry with NLP and image uploads (data extraction from receipts, notes, meals images etc).
- Created an automated **multi-modal data pipeline** that logs entries instantly to **Firestore** and syncs them to **Google Sheets**.
- **Session persistence** - Developed a **context & memory engine** for the agent to maintain accuracy during long sessions, with LLM-generated rolling history summarization to manage complex prompts and prevent context bloat.
- **Auto model-switching** via **LiteLLM** (gemini-2.5-pro ->2.5-flash->qwen) to manage agent uptime during API outages or rate-limiting.
- Serverless backend **developed on Google Cloud Run** and tested the agentic workflows using **Pytest** with 21+ scenarios.
- **Integrating Langfuse** for real-time AI observability of agent’s reasoning paths, tool-calling latency, and token costs.

EDUCATION

- **Master of Computer Application**, CGPA: 8.6 (Lovely Professional University, Punjab, IN) 2022-2024
- **Bachelor of Science - PCM**, 65% (LM College, JNV University, Rajasthan, IN) 2019–2022

CERTIFICATIONS

- **API Integration - End to End Web Development**, Board Infinity | Coursera [\[Link\]](#) Dec 2025
- **Google Vector Search and Embeddings**, Google Cloud | Coursera [\[Link\]](#) Sept 2024
